SANDEEP R N

DevOps Engineer | Site Reliability Engineer | Cloud (AWS · Azure · OCI)

sandeeprn1998@gmail.com | +91 9880589997 | linkedin.com/in/sandeep-rn | sandeeprn.in | Bengaluru, India

PROFESSIONAL SUMMARY

DevOps / Site Reliability Engineer with 3.5+ years of experience running production cloud infrastructure for enterprise SaaS customers across AWS, Azure, and OCI. Hands-on with Docker, Kubernetes (Amazon EKS), Terraform, Ansible, Python, Linux, and CI/CD (GitHub Actions, ArgoCD, Azure DevOps). Automated 15+ hrs/wk of operational toil across a 1000+ server fleet, built SLI/SLO monitoring and alerting across 15k+ checks with Zabbix, Prometheus, and Grafana, identified $4,536/year in cloud waste, and led P1 incident response and RCA for enterprise customers. Holds AZ-400 DevOps Engineer Expert, AZ-104, and OCI Foundations certifications.

CERTIFICATIONS

Microsoft Certified: DevOps Engineer Expert (AZ-400) — *Credential ID: 4790DEDAC422B797*
Microsoft Certified: Azure Administrator Associate (AZ-104) — *Credential ID: 8DA648914E6F9A0E*
Oracle Cloud Infrastructure 2025 Certified Foundations Associate — *Credential ID: 102961170OCI25FNDCFA*

TECHNICAL SKILLS

Cloud: AWS (EKS, EC2, S3, IAM, VPC, ALB, ECR, Route53, CloudWatch), Azure, OCI
Containers: Docker, Docker Compose, Kubernetes, Amazon EKS
CI/CD & GitOps: GitHub Actions, Azure DevOps, ArgoCD, Git
IaC & Config Mgmt: Terraform, Ansible
Scripting: Python, Bash
OS: Linux (RHEL, CentOS, Ubuntu)
Monitoring: Prometheus, Grafana, OpenTelemetry, Zabbix, CloudWatch, Azure Monitor
SRE Practices: SLI/SLO, Incident Management, RCA, On-call, Runbooks, Change Management
Networking: VPC, Subnets, NAT, DNS, TCP/IP, Load Balancing, Firewalls, VPN, IAM
AI Tools: Claude, GitHub Copilot, Cursor

PROFESSIONAL EXPERIENCE

SymphonyAI | (via Aadit Technologies) — *Bengaluru, India*
Senior Cloud Engineer (Site Reliability Engineering) — *Apr 2026 – Present*
Cloud Engineer — *Mar 2023 – Mar 2026*

- **Fleet Automation & Configuration Management:** Authored Ansible playbooks for agent deployment, configuration standardisation, and version upgrades across 1000+ Linux servers — cutting per-server onboarding from ~30 min to under 2 min.
- **Containerised Application Delivery:** Managed Docker-based application deployments across dev, staging, and production — image versioning and validation, container lifecycle management, rollback coordination, and service health verification.
- **CI/CD Release Pipelines:** Supported Azure DevOps release pipelines for patch automation and hotfix delivery — stage gates, environment approvals, and post-deployment verification across multi-environment rollouts.
- **Java Service Release Management:** Coordinated production releases of Java/Apache services — WAR/JAR deployments, Tomcat/Apache rollouts and rollbacks, and log-based troubleshooting of JVM memory/GC pressure, thread exhaustion, and 5xx spikes.
- **Linux Infrastructure Operations:** Administered OCI and Azure Linux fleets (RHEL/CentOS/Ubuntu) — OS patching, performance troubleshooting and tuning, capacity monitoring, and environment validation across production and non-production estates.

- **Python Automation & Tooling:** Built a Python automation suite on the Zabbix API for alert digests, utilisation reports, inventory sync, and maintenance reporting — eliminating 15+ hrs/wk of recurring manual work across multiple teams.
- **Incident Response & Blameless Postmortems:** Led P1 bridge calls with enterprise customers — cross-team triage, fault isolation across app, OS, and infrastructure layers, mitigation, postmortem RCA with follow-up actions, and runbook and escalation upkeep.
- **Monitoring, Alerting & SLOs:** Built SLI measurement tracking a 99.95% uptime SLO across 15k+ URL, synthetic, and service checks; rewrote trigger logic combining response-code and no-data conditions to cut false-positive alert noise.
- **Observability Platform Migration:** Led Zabbix 4 → 7 upgrade across 1000+ servers and 15k+ checks — agent validation, template restructuring, and dashboard overhaul with zero monitoring blind spots during cutover.
- **DR Reliability & RTO/RPO Improvement:** Designed OCI Disaster Recovery Protection Groups for a Tier-1 customer — replaced backup-based DR with orchestrated failover/failback, improving RTO/RPO and enabling repeatable DR drills.

PROJECTS

E-Commerce Microservices Platform on AWS EKS | *Terraform · EKS · Docker · GitHub Actions · ArgoCD · Prometheus · Grafana · OpenTelemetry* | *Personal Project*

- Provisioned a 3-AZ AWS environment with custom Terraform VPC and EKS modules — public/private subnets, per-AZ NAT gateways, ELB subnet tagging, IAM roles, and an EKS 1.30 managed node group (autoscaling 1–4) in private subnets; S3 remote backend with encryption and state locking; right-sized node instance type to control cost.
- Containerised and deployed a 10+ service microservices app — Docker Compose locally, then EKS with Deployments, Services, ServiceAccounts, resource limits, and internet-facing ALB Ingress via AWS Load Balancer Controller.
- Built a GitHub Actions CI pipeline (build → unit tests → golangci-lint → Docker Buildx build/push tagged by run ID → manifest update) with ArgoCD GitOps sync to the cluster; monitored services with OpenTelemetry, Prometheus, and Grafana.

OCI Cloud Cost Automation | *Python · OCI SDK · 20+ Compartments · 8 Regions*

- Built Python tooling on the OCI SDK to detect and clean up unattached block volumes across 20+ customer compartments in 8 regions — identified $4,536/year in cloud waste; dry-run mode and per-compartment safety gates for production safety.

EDUCATION

Master of Computer Applications (MCA) – Bangalore University *2019 – 2022*
Bachelor of Computer Applications (BCA) – Bangalore University *2016 – 2019*
